SUMMARY

Front-End Developer with strong experience building and evolving scalable, accessible, and high-performance web applications. Specialized in the React, TypeScript, and Next.js ecosystems, with extensive experience developing B2B SaaS platforms, architecting Design Systems, and implementing automated testing with Jest and React Testing Library. Hands-on experience with infrastructure optimization on AWS, product analytics implementation with Mixpanel, and RESTful API integrations. Focused on collaborating with cross-functional teams using Agile methodologies to deliver robust solutions that drive measurable business impact.

PROFESSIONAL EXPERIENCE

Mid Front-end Developer
Sympla NOV 2025 — JUN 2026

- Led the development and maintenance of the ticketing platform using React, Next.js and TypeScript, optimizing performance and user experience throughout the purchase journey.
- Structured analytics tracking via Mixpanel across 5 applications, mapping 100+ events for behavior analysis, which drove platform usage by 400%.
- Managed the architectural migration from AWS Redshift to AWS Athena, reducing infrastructure costs through reconciliation scripts and rollout control via feature flags.
- Developed a custom push notifications system with Braze SDK and Service Workers, ensuring high reliability through unit tests with Jest.
- Standardized the private npm package publishing workflow on GitLab Registry, promoting efficient library reuse and accelerating cross-team development.

Tech Stack: React, Next.js, TypeScript, Mixpanel, AWS Redshift, AWS Athena, Braze SDK, Service Workers, Jest, npm, GitLab Registry, Markdown, IA (Copilot, Claude).

Junior Front-end Developer

InfoPrice JUN 2023 — OCT 2025

- Led the front-end evolution of a B2B SaaS pricing platform for 27,000 stores, using React, TypeScript and Redux to ensure scalability and performance.
- Optimized the development cycle by 30% by standardizing components in the Design System with SASS and LESS, ensuring visual consistency and high code reuse.
- Mitigated 40% of production bugs by implementing automated tests with Jest and React Testing Library, reaching 80% coverage on critical business flows.
- Orchestrated front-end application integration with REST APIs, actively participating in architecture definition and inter-service communication contracts.

Tech Stack: React, TypeScript, Redux, SASS, LESS, Jest, React Testing Library, APIs REST.

Junior Front-end Developer

Bornlogic AUG 2022 — JAN 2023

- Led the front-end evolution of a B2B SaaS pricing platform for 27,000 stores, using React, TypeScript and Redux to ensure scalability and performance.
- Optimized the development cycle by 30% by standardizing components in the Design System with SASS and LESS, ensuring visual consistency and high code reuse.
- Mitigated 40% of production bugs by implementing automated tests with Jest and React Testing Library, reaching 80% coverage on critical business flows.
- Orchestrated front-end application integration with REST APIs, actively participating in architecture definition and inter-service communication contracts.

Tech Stack: React, TypeScript, Styled-components, Storybook, MDX, Jest, React Testing Library.
